Mac OS 10.6 Projector Brightness Issue

With the introduction of Mac OS 10.6, UNH Audiovisual has discovered that when connecting a Mac to the technology in classrooms that on occasion the brightness level on the projector is inadequate for teaching purposes.

Following are instructions to adjust the display properties to achieve adequate brightness levels:

1. Navigate to System Preferences (Click on the “Apple” in the upper left hand corner of the desktop)
2. Select “Displays”
3. Select the “Color” option and deselect the “Show profiles for this display only” option
4. From the list of display profiles, select “Apple RGB”

5. If “Apple RGB” is unavailable, try the other profile options till you find a display profile that adjusts the brightness to adequate levels

This should adjust the brightness of the projected image to adequate levels.
