CONSTRUCTION BEGINS ON MOUNT KEARSARGE

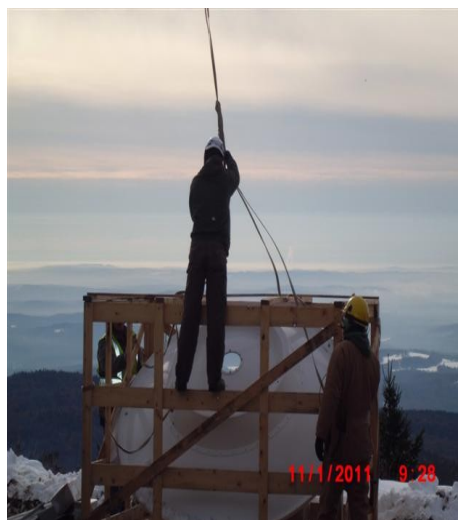

Liftoff of the new microwave dish

November marked the commencement of construction for the NH SafeNet public safety microwave network. Mount Kearsarge is the first of 21 mountaintops to be re-engineered into a consolidated microwave network. The vendor managing the technical design and construction of the network is Green Mountain Communications of Pembroke NH.

Approximately 40 helicopter lifts were required to hoist the equipment from the staging area to the mountain top. The team receiving the equipment made a steep, snowy hike from the staging area to the peak before the helicopter started its transports.

The crew is expected to install the microwave radio equipment, dish, and waveguide before the end of November. Final cutover to the new public safety network will occur in 2013 upon completion of all sites.

Loading the Microwave dish for transport
