Outreach has been the name of the game this fall, as RCC members have participated in networking events, conferences, and working groups to create fresh connections and find new ways to collaborate.

RCC staff members traveled the country, attending the Educause conference in Indianapolis, the Coalition for Academic Scientific Computation (CASC) conference in Arlington, the Northeast Research Computing Day in Worcester, and the Supercomputing 15 conference in Austin.

We were part of the first UNH Aerospace and Defense Technology Day, hosted by UNH Innovation. The idea was to offer speed networking opportunities and the event was a success. We look forward to partnerships that we hadn't previously imagined.

RCC is participating in the recently created Data Management
Services Task Force, along with central IT and the library. This task force will investigate the current state and desired future state of data management support at UNH, with the goal of providing recommendations for bringing best practices in data services to UNH and paving the way for the university to be an exemplar in this emerging area.

RCC continues to work with members of UNH IT and others to bring robust High Performance Computing (HPC) resources to campus for the benefit of all UNH researchers. We will have some exciting announcements to share in spring of 2016.

We thank you for your continued interest and wish you all happy holidays. Feel free to drop a note in our suggestion box.
New at RCC
Oct 05, 2015 09:26 am

The UNH Research Computing Center has seen a few share-worthy additions to its suite of services.

1) The starting point for RCC’s high performance computing (HPC) cluster is the GPX XT24 purchased by funds from Physics Professor Bill Hersman’s grant from the U.S. Department of Defense to study Helium Methane Lasers. It has 16 graphic processor units (GPUs) and allows jobs to run 6-7 times faster per GPU than on RCC’s previous single GPU resource. The next researcher to be taking advantage of this new GPU system is Chemical Engineering Assistant Professor Harish Vashisth.

UNHCEMS Conference
Aug 26, 2015 05:00 pm

On August 21, 2015 UNH hosted the first-ever users’ conference for the award-winning UNHCEMS®. The full day program was the result of the collaborative efforts of the Office of Environmental Health & Safety, the Research Computing Center, and UNHInnovation.
