NH International Seminar

Fall 2018

Global Challenges and Change

Kathy Mills

Research Scientist at the Gulf of Maine Research Institute

Talk (open to all)

Fisheries in a Changing Climate

Thursday, September 20th
12:40 - 2:00 pm • MUB Theater 2

Dr. Katherine Mills (Ph.D., Cornell University) has studied ecosystem change and fish-ecosystem relationships in the Gulf of Maine and Northeast U.S. Shelf regions for over a decade. Much of her research seeks to understand and inform management of fisheries as coupled social-ecological systems. Climate adaptation within marine fisheries is a major focus, with emphases on assessing climate vulnerabilities, evaluating climate adaptation strategies, and providing information to support adaptation planning by fishery participants, fishing communities and fishery managers. Mills' research integrates physical, biological, social and economic information to link changes in the ecosystem and management system to societal outcomes. Her talk will make a case that the Northeast region offers globally-applicable insights and lessons, drawing in parallel examples and case studies from other regions of the world.
