

The University of New Hampshire has administered a **Recent Alumni Questionnaire** to its alums since the 1970s. Beginning the class of 1998 (survey administered in 2000), the questionnaire underwent expansive revision, both in question content and in the format, adapting it to a scanned instrument. Results since then have been posted to the web, <http://www.unh.edu/ir/alumni11.html>. Beginning with the 2005 administration, the survey was sent only to undergraduate alumni.

The information below is extracted from the survey data base to provide direct insights into student success in fields for which they were not explicitly prepared and to document success of graduates achieving other mission-explicit achievement. Information may be organized by any of the column headings providing information about where graduates by major work by industry type, job title, employer and location (city - state). This information represents one year only - the 2007 administration.

The following feature is available in Microsoft Excel mode.

Clicking on the down arrow will develop a dropdown that will provide sort selection ascending or descending or only by the title chosen. In this manner one can pick "RN" as a job title and see that there are four reported and that one was a Geography major. Reclcking "all" will restore the whole chart display again. This is the Excel "Filter" feature found under Data at the top of the screen.
