1. Connect your computer using the VGA cable to Computer 1 In or Computer 2 In input on back of the projector. Turn on your computer.

2. Connect the 1/8 mini audio cord (attached to VGA Cable) to the AUDIO IN below the computer input used (Computer 1 and Computer 2 each have their own AUDIO IN connection).

3. Slide to lens protector to the side to expose the lens.

4. Press the POWER button.

5. Press the SOURCE button.

6. Zoom (make image smaller or bigger) and Focus (to make image less blurry) image if necessary.

7. To adjust the volume, use the volume controls.

8. Press the AUTO ADJ (Auto Adjust) button to optimize your displayed image

9. When finished, Press the POWER button TWICE.
