

RUBE GOLDBERG MACHINE TESTING FEEDBACK GRID

It's time to test! Use this grid to help you evaluate your prototype and see where you want to make changes.

What did you like about your machine? What went well?

What failed (if anything)? Why did that step fail? How can I fix that to ensure it won't fail again?

How can I increase reliability to make sure my machine will work more often?

What can I do better next time? Are there different items I could add to my machine that would improve it?
