Ethics in Research and Scholarship

Spring 2018 Course Information:
Tuesdays, 4:10 – 6:30 p.m. | Service Building Room 125 | Variable credit (2-3), credit/fail
CRN #57019

Course Overview
Individual, professional, institutional, and social issues related to the ethical conduct of research and scholarship. Uses case studies to demonstrate the application of pertinent regulations, policies, and guidelines.

Why Should You Take this Course?
- Examine questions and issues related to the conduct of research and scholarship, including:
  - Who owns the research data that you just collected?
  - What constitutes plagiarism?
  - What should you consider when involving people in your research?
- Gain knowledge of professional and ethical standards of behavior in research and scholarship
- Learn about pertinent regulations, policies, and guidelines
- Learn to identify and to analyze ethical issues that may arise in professional careers
- Develop reasoned and justifiable plans of action

*Course stresses both principles and application

“This was the best course I have taken in my graduate career and I believe it should be mandatory for grad students.”
- Former Student

“I thought the class was an ‘eye-opening’ experience and really codified a lot of things that graduate students just do not get exposed to...I believe that this course should be mandatory for all graduate students and would really help clarify a lot of things that until this course were vague to me.”
- Former Student
