		Total	99,107	99.85%	152	0.15%	

Dashboard includes cumulative test results reported by ConvenientMD, Quest Diagnostics and UNH Lab starting 7/29/2020. Data received as of 09/21/2020 7:00 am.

Important Notes:

- Cumulative data reflects UNH's initiation of protocols starting in late July for regular screening through COVID-19 testing.
- Data are presented according to the date tests are administered. Counts for most recent dates may be incomplete, but will be updated as results are reported.
- Quarantine refers to the practice of separating individuals who have had close contact with someone with COVID-19 to determine whether they develop symptoms or test positive for the disease. Quarantine also reduces the risk of transmission if an individual is later found to have COVID-19. Quarantine for COVID-19 should last for a period of 14 days after the exposure has ended.
- Isolation keeps someone who is sick or tested positive for COVID-19 without symptoms away from others.
<https://www.cdc.gov/coronavirus/2019-ncov/downloads/COVID-19-Quarantine-vs-Isolation.pdf>
- A close contact is defined as any individual who was within 6 feet of an infected person for at least 10-15 minutes starting from 2 days before illness onset (or, for asymptomatic patients, 2 days prior to positive specimen collection) until the time the patient is isolated.
